When it comes to determining a diamond's quality and value there is a universally accepted standard known as the four C's.

## CUT COLOR CLARITY CARAT WEIGHT

### SHALLOW CUT

Light leaks through the bottom. Diamond may have dull reflections.

### IDEAL CUT

As light is reflected from all sides, it comes back through the top sparkling.

### DEEP CUT

Light is lost through the sides. Diamond may appear dark in the center.

The cut of a diamond determines its ultimate beauty. A diamond cut to correct proportions will give off an unrivaled radiance. Cut a diamond too shallow or too deep, and light will escape through the bottom or sides.

## COLOR

Diamonds occur in every color of the spectrum. As a general rule, the less color a diamond has, the brighter its appearance. Truly colorless gems are extremely rare.

## CLARITY

Clarity refers to the number of imperfections in the diamond, known as inclusions. All diamonds possess inclusions; the fewer the inclusions the more rare and valuable the stone.

## CARAT WEIGHT

Diamonds are sold by weight in carats. Each carat is 1/5 of a gram. The heavier the diamond, the more valuable it is. But bigger doesn't necessarily mean better. Quality is found in diamonds of all sizes.
